Workshop

- What does Mapbender do?
- Architecture and Installation
- Register Services
- Create your own application
- User and group security management
- Design adjustments, template printing
- Search module and digitizer

What does Mapbender do?

WebGIS Client Suite with administration web interface

Create a geoportal without writing a single line of code!

Create and maintain an OWS repository

Distribute configured services among applications

Grant users and groups access to
applications and services

Which components does Mapbender use?

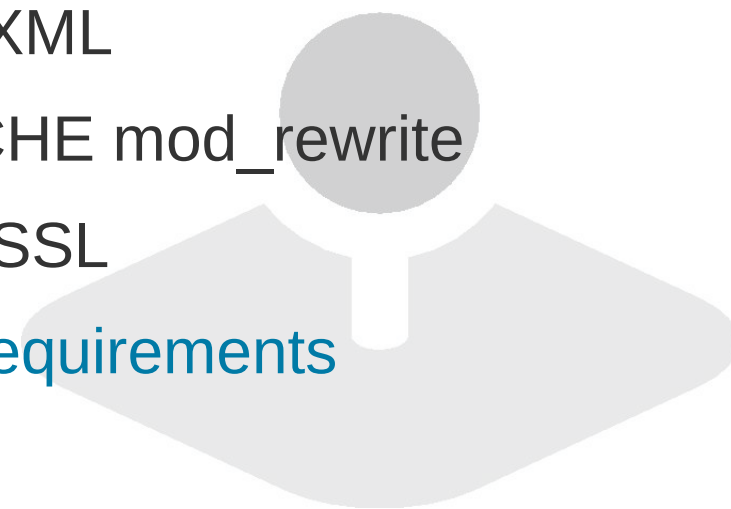

- Symfony as PHP framework
 - Doctrine, Twig, Monolog, Bootstrap...
 - Bundles
- OpenLayers2
- MapQuery
- jQuery
- SQLite, PostgreSQL, MySQL, Oracle database

Systemrequirements

- `>= PHP 5.6 (php)`
- `PHP CLI interpreter (php-cli)`
- `PHP SQLite extension (php-sqlite)`
- `PHP PostgreSQL extension (php-pgsql)`
- `PHP cURL extension (php-curl)`
- `PHP Internationalization-extension (php-intl)`
- `PHP GD (php-gd) (Print)`
- `PHP FileInfo (Print)`
- `PHP Zip`
- `PHP XML`
- `APACHE mod_rewrite`
- `OpenSSL`
- See [requirements](#)

Mapbender Code on GitHub

Installation

- Read about [Mapbender Installation](#)
- Workshop Installation [install_mapbender.sh](#) of OSGeo-Live
- Download <https://mapbender.org/en/download>
- Or use the code from GitHub
<https://github.com/mapbender/mapbender-starter>

Start Mapbender

- Symfony test configuration
<http://localhost/mapbender/config.php>
- Developer mode
http://localhost/mapbender/app_dev.php
- Productive mode
<http://localhost/mapbender/app.php>

Symfony Configuration - Mozilla Firefox

File Edit View History Bookmarks Tools Help

Symfony Configuration

localhost/mapbender3/config.php

Google

Symfony

Welcome!

Welcome to your new Symfony project.

This script will guide you through the basic configuration of your project. You can also do the same by editing the `'app/config/parameters.yml'` file directly.

MAJOR PROBLEMS

Major problems have been detected and **must** be fixed before continuing:

1. Set the `"date.timezone"` setting in `php.ini`* (like Europe/Paris).

* Changes to the `php.ini` file must be done in `"/etc/php5/apache2/php.ini"`.

[Re-check configuration >](#)

_template_default_vars	*Array(0 => slug)*
_template_streamable	*false*
template_vars	*Array()*

Find Mapbender on OSGeoLive?

- ALIAS mapbender refers to:
`/var/www/html/mapbender/web/`
- `app_dev.php` → `mapbender/web/app_dev.php`
- Mapbender:
`mapbender/mapbender/src/Mapbender/CoreBundle`

Enjoy YAML syntax!

- Symfony configuration via YAML
- Mapbender configure database, language, mailer & more
 - parameters.yml
 - config.yml
- Mapbender application can be defined in YAML
 - mapbender/app/config/applications/
 - Define your application and services

Mapbender database

- PostgreSQL, SQLite, ORACLE, MySQL, MS SQL
- PostgreSQL is recommended!
- Tables for WMS, User, Group, Layers etc.
- Doctrine integrated in Symfony provides database abstraction layer

Templating

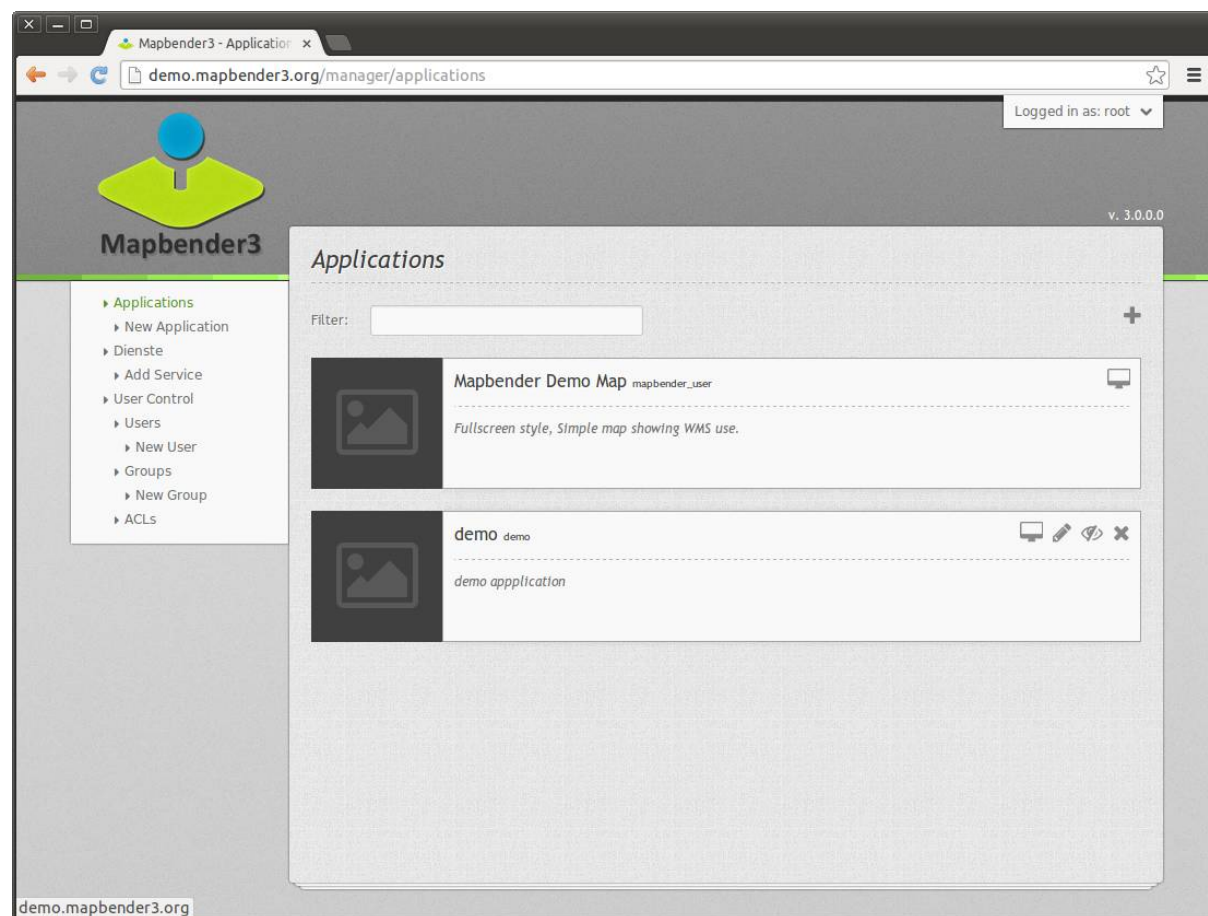

- **Template** → Reference in mapbender.yml:
 - Mapbender\CoreBundle\Template\Fullscreen
- **Css-File**
FOM/CoreBundle/Resources/public/css/frontend/
 - mapbender3_theme.css → Colour, Icons, Fonts
 - fullscreen.scss
- **Twig Template**
Mapbender/CoreBundle/Resources/views/fullscreen.html.twig

Application Overview

- Application overview
- Call sets Session to Anonymous User
- View title, description, screenshot
- Start Application

Login

- root user is created on installation
- You can provide Register and Forgot password functionality

A screenshot of a web login form. The title "Login" is at the top left. Below it is a dashed horizontal line. There are two input fields: "Username:" followed by a text box with a cursor, and "Password:" followed by a text box. At the bottom left, there are two links: "Register" and "Forgot password?". At the bottom right, there is a green button labeled "Login".

Welcome to Mapbender

Welcome to Mapbender

The open source software Mapbender is a content management system for geospatial data services and map applications. With Mapbender you can create applications without writing a single line of code. Based on state-of-the-art technologies Mapbender is a flexible client for OGC services.

Mapbender is based on the frameworks Symfony, JQuery and OpenLayers.

Hands on

Hands on – Part I

- Load WMS
- Create your own Application
- Populate application with Services
- Get elements for your application
- Create user and groups
- Assign application to user and groups
- Assign element access to user and groups

Hands on – Part II

- Print
- Define an individual Design
- Create your own bundle
- Setup a Search module
- Setup a Digitizer module

Mapbender Documentation

- Mapbender Quickstart
<https://doc.mapbender.org/en/quickstart.html>
- Element documentation
<https://doc.mapbender.org/en/functions.html>

Load WMS

OSM WMS

- <https://osm-demo.wherogroup.com/service?REQUEST=GetCapabilities&Service=WMS&Version=1.3.0>
- http://localhost/cgi-bin/qgis_mapserv.fcgi?map=/usr/local/share/qgis/QGIS-NaturalEarth-Example.qgz&SERVICE=WMS&VERSION=1.3.0&REQUEST=GetCapabilities
- Find a WMS Server for you needs
- <https://inspire-geoportal.ec.europa.eu/>
- <https://inspire.ec.europa.eu/INSPIRE-in-your-Country/RO>

WMS Romania

- WMS Romania
- <http://geo-spatial.org/geoserver/omc/ows?service=wms&version=1.3.0&REQUEST=getCapabilities>
- Find some more

Create your own Application

- Generate an application FOSS4G (Fullscreen Template)
- Switch to tab Layout
- Insert Map-Element in region content
 - SRS EPSG:4326
 - MAX EXTENT of Romania
lower left 20.1139 43.5602
upper right 29.8267 48.3647
 - Start Extent Bucharest
lower left 25.8762 44.2494 upper right 26.4729
44.7770
 - Add some more scales

Load Services to Mapbender Repository

- Load Services to your Mapbender Repository
- Source → Add Source
- Load WMS

<https://osm-demo.wherogroup.com/service?REQUEST=GetCapabilities&Service=WMS&Version=1.3.0>

- Load other Services from Romania

Populate application with Services

- Switch to tab Layersets
- Create a layerset for the main map and a layerset for the overview map or layersets for different topics
- Add WMS to your layersets
- If necessary configure the services

Activate Layersets in Map-Element

- Go back to layout to your map-Element
- Choose the layerset/s you would like to display in the main map

Add elements to your application

- Find information about the elements in the documentation
- <https://doc.mapbender.org/en/functions.html>

Try to integrate some Elements:

- Scaleselect, Navigation Toolbar, Scaledisplay, ShowCoordinates, Overview
- Layertree, Legend, Redlining in the sidepane

Discover more elements

- Find information about the elements in the documentation
<https://doc.mapbender.org/en/functions.html>
- Measure, FeatureInfo, Image Export, LoadWMS
Notice: Some elements need a button to get activated
- HTML element
- BaseSourceSwitcher
- PrintClient

Easy way to create an application

- Copy an existing application
- reorder elements and delete everything you do not need
- add your own services

Create user

- Create user foss4g
- User control → User → New User
- Define user name, email and password

Assign application to user

- Application → pen → Application Security
- + → Select user → Give permission **view**
- **Access Control List**
- Test the permission by registering as user foss4g
- Note: You also can assign access to single elements

Create a group

- Create a group called **workshop**
- User control → Groups → New Group
- Add your user **foss4g** to the group **workshop**
- Assign an application to your group **workshop**

CSS Editor

- Default style can be overwritten
- Switch to tab css-Editor
- Define a different background color
- Examples:
- <https://doc.mapbender.org/en/customization/css.html>

Try the workshop bundle

- Find a workshop bundle at <https://github.com/mapbender/mapbender-workshop>
- <https://doc.mapbender.org/en/customization/templates.htm>
- Change the title of the twig file
- Change css parameter in the scss file

Search

- Define search with SearchRouter
- SQL Search
<https://doc.mapbender.org/en/customization/templates.htm>
- Setup a database connection in parameters.yml and config.yml
- Define the search form as YAML definition

Digitizer

- Define digitize functionality
- Edit directly on a database table

<https://doc.mapbender.org/en/functions/editing/digitizer.html>

How can I participate?

- Testing
- Reporting Feedback and Bugs
- Documentation
- Programming
- Mailing lists
- Translation

Join us during the **FOSS4G Community Sprint** on
Saturday! Everyone ist welcome!

Thanks you for your attention!
